

IS/IT Technology Engineer - Sales & Marketing Applications

Do you love to perform complex technical analyses in a challenging environment? Are you a strong communicator and a natural in establishing great working relationships with your colleagues? YES? Take a moment to read more about this position!

Your challenges as an IS/IT Technology Engineer

As an IS/IT Technology Engineer you are part of the **Marketing and Sales applications team** that takes care of the life cycle of marketing and sales related information systems. You face a lot of **technical challenges**: you perform technical analyses and queries, you do scripting, debugging and make sure that possible issues of new and existing applications are dealt with. Moreover you ensure with your accurate approach that the implementation and testing of applications are in line with internal and enterprise practices. Thanks to your strong communication skills you will pass your technical knowledge to others by providing **application trainings** to key users (train the trainer principle) and technical trainings to the support team. As an IS/IT Technology Engineer you will often work with following technologies:

- ❖ Python/Javascript or another scripting language
- ❖ Microsoft Excel (programming) and Word (templating)
- ❖ Web application architectures

Another challenge consists in guaranteeing the **quality of the system processes** that are in line with the business processes and the application architecture. To do so, you systematically capture feedback during the implementation and you make sure the required documentation (e.g. architecture drawings) is at all times up to date. By ensuring quality you will be able to **improve the user experience**.

In general you actively help in **safeguarding the overall application architecture landscape**, and involve required parties in case of non-adherence to our vision.

Your IT DNA

You dispose of an **analytical out-of-the box mindset** and maintain a high standard of quality. You preferably have a bachelor's degree in **computer sciences** or similar through relevant experience. A strong affinity to **IT applications** is required and it is considered a plus if you are familiar with some key principles within the world of CPQ (Configure – Price – Quote), e.g. constraints, options management and price management. Thanks to your good knowledge of English you can easily establish great **international working relationships** with our customer centers and product companies.

Enthusiasm, professionalism and strong communication characterise your approach as a teamplayer and make it easy to **integrate** within the existing team. Furthermore, “Sharing is caring” is your favourite principle which means you strongly encourage **knowledge sharing** between colleagues.

Atlas Copco offers you more than a wage...

Atlas Copco empowers you to seize opportunities, to **grow** and to take more responsibilities on (inter)national level. This in a growing company that can rely on a solid and steady “track record”, a powerful reputation and a clear and sustainable **vision for the future**. This also means that you as an **employee** are clearly **at the center**. You receive a mentor who can be a function board if you want to. Priority at Atlas Copco is the major focus on **innovation**, the attention to an excellent **work-life balance** and to **professional progress**.

Furthermore, we offer **training opportunities** which entitle you to plot your own career path. You also have the opportunity to get to know other departments within the company thanks to the close collaboration of those with the IT department.

Over time, you can choose to manage **larger projects and budgets**, to become teamleader or to take up a position within another division. It's self-evident that you get an **attractive salary and a wide range of fringe benefits**. Your talent and passion for the Industry 4.0 deserve it. In that way you provide a significant contribution to make the world a better place to live.
