

About UnifiedPost

UnifiedPost is a Business-Process-as-a-Service provider (BPaaS). We build and run transaction hubs that optimize multi-stakeholder, document-driven business processes. UnifiedPost offers a complete technology portfolio for identity management, document management, payments & payment management, app stores with value added services. We support corporates and B2B communities.

Our solutions range from the mundane, such as e-invoicing, to the clever "FinTech", facilitating asset-based lending services and alike. Unlike many point-solution providers, UnifiedPost is the one-stop-shop for streamlining your financial value chain.

Facts & Figures

210 FTE, across Benelux and Eastern-Europe - 200M documents processed per year - Top-tier customer references, across multiple industries - Licensed Payment Institute UnifiedPost strives to become the European solution provider of choice that powers transaction platforms in various industries and B2B(2C) communities.

The challenging near future of UnifiedPost requires our IT Opls team to be completed with a

IT Operations Engineer (based in Ghent)

You will be responsible to ...

- make sure that the company IT infrastructure works
- execute innovation projects
- follow up on daily production processes by monitoring systems and applications
- do trend analysis based on the available logging information and pro-actively act to prevent service decrease
- measure system performance and interpret logging information
- suggest how logging, measurement and reporting can be improved
- detect, register, solve and report production issues.

We would be happy if you ...

- are passionate about system engineering, eager to master Linux administration (CentOS, Redhat). A Bachelor ICT proves you are.
- are proactive, take ownership, focus on problem solving more than problem finding and think about continuous improvement
- are an excellent communicator – English is our group’s common language, so excellent spoken and written English is a must
- value team effort, are a team player and deliver autonomously with little supervision
- are always curious about new technologies and development methods

This is what you win ...

Challenges: we’re transforming the world of business communications and transactions. You will develop your technical skills but also your knowledge about business processes.

Responsibility: making a difference in decision-making means you take on responsibility, not just tasks

Common purpose: you grow by learning new skills and we benefit from your knowledge. We all work together towards one goal

No reason to stress we are a competitive partner on the labour market. An interview is the best opportunity to tell more about our extra-legal holidays, the company car you’ll get,
