

# Java Bootcamp

TVH is looking for high potentials with a passion for software development.

At the moment we are setting up a custom made educational program to help starting developers gather the necessary tools and knowledge to cope with the challenges within the technically diverse landscape within TVH.

This 'Bootcamp' will focus on specific topics such as Software development in Java, Web development, Devops and Testing. You will learn how to deliver clean code based on best practices and guidelines, guaranteeing quality by writing unit and integration tests. The training is given by experts within their field who will introduce you to the in's and out's of the technology. You will be presented with practical exercises which will help you integrate the new information.

Upon successful completion of the program you will integrate in the software development teams within TVH, which are all working following the principles of Agile development.

Here you will continue to evolve under the watchful eye of your more experienced colleagues who will serve as a guide throughout your personal development.

Our brand new IT building is set up to fulfill all the needs of the squads to make their work as comfortable and efficient as possible.

Java, Spring, JPA, Rest, Soap, JavaScript, Angular, Drupal, Microservices, Docker, Kubernetes, Spinnaker, Git, HTML5, CSS ... These are just some of the technologies you will be introduced to during training. Considering your interests and the business needs you get to specialise yourself in specific technologies.

We are looking for motivated candidates who are looking for a professional career within Software development.

A knowledge of the basic principles of Object Oriented programming is required.

Sounds interesting?
