

CHILI
publish

Junior C# Developer

Our team doesn't write code, it develops. This mindset created some market altering solutions for the graphic arts industries. Our solutions must stay sharp, that's why we need C# reinforcement.

How will you contribute to the CHILI publish SDK?

Writing the code to test our products and maximize their potential will be essential. We'll be counting on you to develop the proper internal tools for code management, code review, automated testing, bug tracking, etc. You'll get an all-rounder project for you to sink your teeth in.

Are you the one?

You know your C#, Webservices and Source Control? These should be a given in your skillset. Knowledge of C++ or Java? Bonuspoints! Experience is a nice to have, not a must.

What's in it for you?

- An attractive salary package and extralegal benefits – obviously.
- A swell office dwelling in Aalst – no traffic jams to Brussels and the new hipster place to be.
- The support of a fun team of good folks. They'll even let you take first turn on the PlayStation 4. (we heard rumors of a FIFA tournament kicking off soon.)
- The opportunity to code crunch on a renowned product at an international company. (English is the office language, but we do Dutch/French/German and local dialects too.)

You'll see we work hard, play hard. Care even more.

HOW?

Visit our career page and send in your application! We answer all candidates.
