

Are you brave enough to join the Big Data Movement?

Big Industries is Belgium's leading Big Data systems integrator. We offer expert consulting for Architecture definition, Data Lake on premise or Cloud Deployments and advanced Data Engineering.

In short: Customers come to us when they want to start their Big Data Journey.

We are partnering with cloud providers AWS and Azure and "Best of Breed" vendors like Cloudera, StreamSets and Confluent.

We love Big Data

Big Data means lots of data in all kinds of forms. Raw data, structured data, streaming data,...

We are looking for people who are passionate about new technology and are open to share their knowledge with their colleagues and clients.

Knowledge is Key, Sharing is Caring

We work with cutting edge technology. The Big Industries Academy is a platform for continuous learning by sharing expertise & knowledge with the Team. We encourage to try new things out and let the world know what works well (and what doesn't 😊).

Work hard, Play Hard

At Big Industries we go the extra mile to deliver our projects. While we take our job seriously, we also like to have fun and enjoy life. Our team events can be adventurous or we can just relax, cook together and build comradery. Having fun while you work and working with people that you enjoy being around is what matters to us.

Junior Data Engineer

Big Industries is seeking a Junior Data Engineer to join our fast growing consulting team in Belgium.

Big Industries is Belgium's leading Big Data systems integrator. We offer expert consulting for Architecture definition, Data Lake on premise or Cloud Deployments and advanced Data Engineering.

In short: Customers come to us when they want to start their Big Data Journey.

We are partnering with cloud providers AWS and Azure and "Best of Breed" vendors like Cloudera, StreamSets and Confluent.

As a Junior Data Engineer you will be working on implementing complex and large scale big data projects with a focus on collecting, parsing, managing, analyzing and visualizing large datasets to turn raw data into insights using multiple toolsets, techniques and cloud based platforms.

We are looking for young people who are passionate about new technology and are open to share their knowledge with their colleagues and clients. A positive attitude is everything.

Ideally you have:

Thorough understanding of Java, SQL and solid grasp of software development best practices.

First experience using Big data and related technologies, ideally with popular hadoop data processing pipeline patterns and technologies (cascading, crunch, oozie).

Willing to work to become AWS or Cloudera Developer certified.

Development exposure on both cloud and classic compute environments.

Very good Linux systems and Linux shell scripting knowledge.

Good knowledge of common ETL tools (Talend, Informatica, ...) is a plus
