

## TRAFFIC ENGINEER

Be-Mobile is a European market leader in smart mobility solutions, with headquarters in Ghent. We are developing and selling advanced solutions to measure and control traffic flows. We put travelers, cities, road authorities, parking operators and logistic companies back in control over their mobility processes.

**To strengthen our team, Be-Mobile is looking for a traffic engineer who is interested in working in a cutting-edge, socially engaged environment.**

### RESPONSIBILITIES

Traffic Lab is the brain of our organization, where all the research is centered and where innovation begins. To expand and reinforce this team we are looking for a traffic engineer who will have following responsibilities:

- Together with the team you develop traffic prediction models, techniques for fusion and statistical analysis of traffic data, geo ICT processes and traffic algorithms. These new models will be prototyped in Python or Matlab and translated into technical specs for our developers and business analysts.
- You contribute to innovative research projects by actively developing new insights and cooperating with knowledge institutes and research partners.
- You act as project manager for projects within your domain of expertise and work together with clients and internal stakeholders.

### PROFILE

The must-haves we are looking for are:

- Higher relevant degree (engineering, data-analytics, geography, technology) and strong technical curiosity.
- Fond of analyzing big data and eager to use your creativity to come up with new opportunities.
- You take ownership and value good communication with clients and colleagues to work out technical specs, ready for further development.
- You keep track and overview over different projects and you are result oriented.
- Standard project methodology (such as Prince II) knowledge and practice are seen as a plus.

The values that make a great Traffic Engineer in our team are:

- Eye for detail during your analyses, but creative and open minded in your advice.
- Ability to harmonize working on high tech concepts/technologies with a can-do mentality and organizational culture.
- Taking ownership in your projects but also in the collaboration with your contacts.
- Willing to share knowledge and natural tendency towards continuous improvement.

If you recognize yourself in these requirements, we are happy to hear from you!

## OUR OFFER

As a fast-growing company with **cutting-edge technologies**, we invest in **durable and interesting careers**.

We aim for continuous development by mapping your professional growth on the opportunities within Be-Mobile.

You'll feel at home if you share values like **integrity** and **open feedback**.

Our **young, trustworthy and passionate team players** are curious to get to know you! Are you as well?

We provide a very **interesting total remuneration package, flexible working hours and healthy team initiatives**, which we will explain during the selection process.
