

SKF is a world leading supplier of products and solutions in the rolling bearing business. In addition, SKF is one of the leading players in lubrication systems, seals, mechatronics and services which include technical support, maintenance services... SKF is a truly global company that counts 47 000 employees, with presence in more than 130 countries, serving an extensive range of industries and customers worldwide.

Two SKF entities are located in Belgium: SKF Belgium NV/SA in Brussels (120 employees) and SKF Logistics Services Belgium NV in Tongeren (400 employees).

The location in Brussels houses several units active in sales of products and services in the Benelux, the Middle-East and Africa. For its lubrication systems unit in Brussels, SKF Belgium NV/SA is looking to hire a (m/f),

Application Engineer

join an established company, major leader in the field of lubrication systems

YOUR FUNCTION

You are a technical service provider for your industrial customers within the different segments. You will give them tailor made advice with regard to lubrications in specific appliances. Customers are located within the Benelux, and there might be limited travel included in Belgium.

Your role includes the following responsibilities:

- You analyse the technical questions of the customer and you give a timely reply and / or solution
- You analyse existing lubrications and you work on improvements
- Together with Sales, you support the development of customer oriented solutions as technical specialist
- You give internal and external training, for products as well as for applications
- You work on your customer portfolio by keeping close contact with the engineering departments of your customers
- You are project leader for customer projects, in close cooperation with our project coordinator

YOUR PROFILE

- You have a bachelor degree or a minimum of 2-3 years of business experience in hydraulic or lubrications environment.
- You have a strong affinity for technical matters, industrial products & services.
- You are capable to offer creative solutions with standard components. You can easily analyse technical problems.
- Excellent communication skills, results focused and driven, pragmatic, tenacious and team player are also skills you possess.
- You are customer focused and have an excellent command of Dutch, English and French.
